

SPECIALITY PRODUCT (Micronutrient)

ZINTECH (Zinc Chelated with Zintech)

Zinc is essential for oxidation reaction, carbohydrate metabolism, sugar usage and formation of tryptophan amino acid which further helps in producing growth promoting compounds like Auxins. The Auxins in turn help in flower production and retention, ultimately enhancing the yield. Zinc can be easily supplied through is a high-quality fertilizer containing water soluble zinc and gives faster results compared to its ionic form.

Essential Content : Zintech (Zn) : 12.0 %

Benefits of Zintech

- Zinc is Chelated with EDTA to give immediate supply of Zinc to plants
- Zinc also contributes towards chlorophyll synthesis and thereby increases photosynthesis activity
- Zinc-treated plants become healthy and resist diseases
- Zinc helps in setting of flowers, fruits and also increases quality and quantity of produce

Application Details:

Foliar spray: Zintech is suitable for foliar spray at 1 gm / ltr of water at 30 & 45 days after sowing / transplanting

Fertigation: Zintech is also suitable for fertigation at 2 kg per acre at 15 and 45 days after sowing / transplanting

Packing : 250 & 500 gm
