

SPECIALITY PRODUCT (WSF)

JAI KISAAN POTASSIUM SCHOENITE

Plants require essential nutrients for their growth and reproduction. These nutrients are very important mainly they not only involved in growth and development but also increase the efficacy of other nutrients. Nutrients such as Potassium and Magnesium are particularly involved in the Paddy, cotton, sugarcane, vegetables & other field crop phase of plant growth and hence determine the yield and quality of the produce. They also provide resistance against abiotic and biotic stress. Application of these nutrients will improve growth, development, reproduction, quality and yield.

Nutrient Content: Potassium (K₂O): 23.0 % & Magnesium (MgO): 11.0%

BENEFITS OF APPLICATION OF JAI KISAAN POTASSIUM SCHOENITE

- Helps in uptake of other nutrients
- Elucidates excellent response of crops grown even in less fertile soils
- Increases photosynthetic rate resulting in increased growth leading to better yields
- Is suitable for application to all soils and all crops

Application Details of Jai Kisaan Potassium Schoenite:

Crops	Dosage / acre	Time of application
Paddy, cotton, sugarcane, vegetables & other field crops	25 to 50 kg	At time of sowing / planting
Fruits, plantation crops etc.	250 to 500 gm per plant	250 to 500 g per plant

Foliar application : Jai Kisaan Potassium Schoenite @ 5 gm /litre of water 2 times at 15 days interval during grain/fruit/ boll/ pod development stage.

Available in 25 kg bags.
